

# respiro

START COOL STAY COOL

Respiro is our top line dedicated to the more demanding cyclist. It features the innovative Cool Cover and a Ventilation Channel which also relieves pressure from the genital area, whilst preventing sweating.

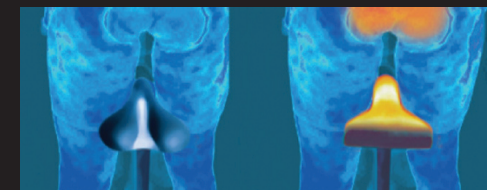

When riding for a long period of time or leaving your saddle in the sun, a saddle can start to dramatically increase in temperature. Rising above the rider's skin temperature, the saddle creates an unpleasant feeling of perspiration and discomfort. Eventually this discomfort can cause pain. Respiro, meaning to breathe in Italian, avoids this by keeping the saddle up to 25% cooler thanks to the cool microtex cover and the ventilation channel. These breathable saddles have been specifically designed to help you enjoy your longer rides.

## VENTILATION CHANNEL

## INFRARED CAMERA - TEMPERATURE TEST

● COOL – RESPIRO SADDLE

● HOT – ORDINARY SADDLE

## COOL COVER UP TO 25°C COOLER IN SUNLIGHT

### NORMAL COVER

When leaving the bike in the sun during the summertime for 10 minutes, as ordinary saddle warms up quickly.

### COOL COVER

Our saddles with Cool Cover remain 25°C cooler than normal black saddles, as shown in the below graph.

## INUX RAIL

Inlux is an alloy that has mainly two very important features:

- a) resistant to corrosion in all weather conditions and will not rust;
- b) are much lighter than the MG Rail (-20% that means 16 grams);

## ZAMA PROTECTION

Zama is lightweight, high strength alloy:

- a) extra resistant, so no damage in case of fall;
- b) extra light, almost the same weight of plastic protections;
- c) resistant to the corrosion;

Respiro saddles available for Man and Woman in Sport, Athletic, Moderate and Relaxed version
